Dear HR of sagemcom,

I am currently a final-year student at the National School of Computer Science (ENSI) and am looking for a Final Year Engineering internship ideally lasting 4 to 6 months.

I am writing to express my keen interest in obtaining a SOC Analyst internship . I completed an internship in the SOC field as a SOC Analyst and Pentester at SmartSkills,

then I wrote an article on deploying a SIEM solution in the cloud. You can read it here: <https://medium.com/@khaled.mrad/deployment-of-soc-as-a-service-socaas-architecture-and-technologies-16b014e26af4>

During my recent internship at Orthlane, I demonstrated my capabilities in DevOps practices by developing and optimizing a development environment for Apache NiFi using Docker. I implemented CI/CD pipelines with GitHub Actions and automated deployment to Azure, which significantly streamlined the deployment process.

and as s a Microsoft Student Ambassador and Training Project Manager at the Open Source Software ENSI Club, I've demonstrated my leadership capabilities and commitment to knowledge sharing.

Thank you for considering my application.

Kind regards,

Khaled Mrad
